

SUCCESS STORY

# A secure cloud landing zone to accelerate bank transformation

**Leading automotive manufacturer's financial arm stays on top with a modern core banking platform and data management on cloud**

With a SaaS model the bank is spared of the need for investment in technology

70% lower processing costs that are always aligned with business success

Bank has freedom to innovate without limits

CLOUD ENGINEERING

THE CHALLENGE

## Deliver a secure cloud landing zone to facilitate a strategic business transformation

- Automotive Financial Services Division wanted an experienced technical partner to help accelerate its business transformation. A secure landing zone on cloud was a prerequisite and would provide a baseline to deploy workloads, applications and data
- As an authorised AWS Advanced Tier Services Partner, GFT had the essential technical skills and experience to help the Bank meet its ambitious deadline and had the right service culture and flexibility to work as an extension of the bank's IT department

THE ENGAGEMENT

## The power of teamwork

- With GFT as its technical partner the Automotive Financial Services Division established a project to migrate to a cloud-based infrastructure.
- The financial services division seized the opportunity to migrate its infrastructure to AWS cloud.
- The bank faced a fixed deadline as its legacy platform licence was due to expire within a few months and could not be extended without major expenditure. A GFT cloud architecture and security team assessed the approach and strategy.

THE BENEFIT

## A model cloud landing zone

- The financial services division can migrate its core banking business to the cloud immediately. Other workloads can be migrated at a pace that suits the bank's business and technology strategy.
- The AWS landing zone offers ready access to a secure, multi-account environment that offers state-of-the-art processing, automation and access
